MULTI AWARD WINNING

Why Use A Medical Alert System?

- If you're a Senior living alone.
- If you have, or are at risk, of falling.
- You worry about a loved one when you are out.
- To give you and your family complete peace of mind because help is always with you.

What Is safeTcare?

When the button is pushed or if a fall is detected, you are connected within seconds to our professional response & monitoring centre and you will immediately receive the help you need.

We are more than just a call centre, we're a support network available at all times. "

Why Choose safeTcare Professional Monitoring?

Having a professional, independent, specialist response centre with experienced responders manage the emergencies is far better than relying on friends and family. Our response team are trained professionals who deal with medical emergencies every day. They are calm, fast acting, and know the right information to collect to ensure the ambulance has everything they need, including the customers exact location and full medical history on screen.

" Because in an emergency, every second and the small details, count. "

Benefits of a Monitored System

- Available 24 hours a day, 7 days a week, 365 days a year, no exceptions
- Trained experts responding to an emergency
- Trained experts handling false alarms
- Trained experts organising an ambulance who have access to your medical information
- Trained experts who remain calm and reassuring

Dangers of Self-Monitoring

- Family and friends are not always available (in shower, on toilet, on phone, work meeting, movies, sleeping etc)
- Injured person might not want to worry/bother family so don't push the button, or they downplay the extent of the injury.
- Family and friends are not trained to ask the questions that the ambulance will require in the event of an emergency.
- The emotional toll on family and friends is high, even when it's a false alarm.
- The possibility of family and friends panicking and making errors.

" ...it is important to be aware that 000 calls from automated devices, such as auto diallers, cannot be guaranteed a response from the emergency services. "
